

Hoi 5.1.2e

van wanneer is het document? De situatie lijkt in ieder geval voor NL te zijn veranderd.

Ik zie er geen aktiepunt mbt meer standardiseren van de PCR resultaten in staan. Wil je dat toevoegen?

Er staan zaken in die niet (meer) kloppen ; ik neem aan dat dat ook voor andere landen geldt?

1.3 Testing Turn-Around-Time

"Among the other countries, large differences exist, in particular concerning the time between the test request and the sampling. While in Belgium this takes up to 16 hours, in BG, EE, IE, MT and NL it takes around 24 hours "

en

"The time required between the sampling and test result is less than 24 hours in 8 countries (EE, FR, HU, HR, NL, ES, UK, NO)".

Sommige aktiepunten zijn op dit moment ook niet haalbaar in NL lijkt me.

- ☒ Countries should aim to have as a target a turn-around-time of 24h hours (from request to be tested to the result shared with the individual tested and public health officers), in order to ensure the effective implementation of mitigation measures as well as swift contact tracing.
 - ☒ Shorter TAT and contact testing initiation should be ensured for critical staff, such as healthcare workers and other people who work in long-term care facilities, teachers, as well as to control clusters in schools.
 - ☒ Countries should ensure that symptomatic people, including visitors, seek and are able to access testing as soon as possible after symptom onset.

1.6 Antigen and antibody tests

Bij het stuk over antigen and antibody testing mis ik het gebruik van antibodies om quarantaine te aanpassen/verkorten bijv. bij langdurige positieve patienten. Dat lijkt me zeker in hospital setting en verpleeghuizen een mogelijk toepassing-

sterker nog , het wordt al zo gebruikt begreep ik.

Bij 1.1 Objectives of testing strategies

staat

Based on available testing capacities and the level of influenza circulation, it may be necessary for countries to readjust their testing strategies for symptomatic cases and prioritise specific target groups with COVID-19 compatible symptoms. Moreover, multiplex RT-PCR tests⁷ are available to detect multiple respiratory viruses in the same specimen including SARS-CoV-2 and influenza. The use of such tests for generalised, high capacity, differential diagnoses of viral respiratory infections should be introduced, in particular from October 2020 to Spring 2021, as competing demands will surge for diagnosis due to similarity of symptoms and presentation.

Dat zou betekenen dat vanaf oktober de meeste labs een multiplex moeten gaan invoeren? Of alleen voor een diagnostiek vraag - in klinische setting en niet voor de teststraten?

groet

Hoi,
 Zoals net genoemd in mailtje van paar minuten geleden met het nieuwe EU-testbeleid, hierbij nog een mailtje met vraag om input vanuit de EU.
 Graag morgen tijdens kernteam bespreken of iemand hier input op heeft.

Onderwerp: Publication of common testing strategy + Request for info on mutual recognition of RT-PCR test results

Dear members of the Health Security Committee,

Dear colleagues,

Please be informed that the document on a common EU testing strategy, as agreed by you yesterday and as amended by the suggestions sent in before 17:00, has now been published and can be found here:

https://ec.europa.eu/health/sites/health/files/preparedness_response/docs/common_testingapproach_covid-19_en.pdf. A news item is available here: https://ec.europa.eu/commission/presscorner/detail/en/MEX_20_1696

Secondly, in the context of testing, we would like to ask you if you are currently experiencing any difficulties in terms of **recognition of RT-PCR test results between MS** (e.g. in the case of incoming travellers who are required to provide a negative PCR test result)? And if so, is this causing a problem? For example, is there a need to agree on certain conditions required for the mutual recognition of RT-PCR test results?

We would appreciate it if you could get back to us by Tuesday 12:00.

Kind regards,

HSC Secretariat
